

YOU HAVE A NEW FELLOW PASSENGER. THE ENVIRONMENT.

Dinamica® by MIKO is an ecological suede for the automotive sector that has less environmental impact than similar products. **It is produced using a combination of recycled polyester** made from plastic bottles, polyester fibres, and water-borne polyurethane. Similar to recycling paper, no harmful chemicals are used during the production process of **Dinamica®**. Recycling the polyester from plastic bottles means that energy consumption is reduced by 84%, and CO₂ by 77%, compared to the regular process of manufacturing polyester from petroleum.

In other words, by choosing **Dinamica®** for the interior of your vehicle, you make a more natural choice, which can lead to a positive environmental outcome.
